

Components made by Kramski

Do you experience capacity constraints in the tool room? We have over 20 years experience in building high-performance stamping dies and possess immense manufacturing know-how in die parts made from carbide. Our expertise is now available to you.

We are able to produce custom-made tooling components to your drawings, from simple to the most complicated in the business. Combined with our tool making expertise, an array of the finest and latest machinery are at your disposal. Our spectrum of capabilities ranges from high-speed 3D milling of hardened mold cavities to the most complicated details for injection molds or stamping dies. Parts made from high-speed steel, carbide or ceramic material are our specialty.

Utilize the strength of our technical expertise and our quick deliveries to your advantage! Contact us for an inquiry without obligation. Fax us your drawings or e-mail them in either DXF or IGES format. We are at your service!

KRAMSKI

Components for Stamping Dies & Molds

To achieve the highest uptime with your tools it is essential to utilize tool components and spare parts of the highest possible quality. The choice of the best raw material for a given application is of utmost importance. Not all carbide is equal (We will advise you)! Our employees are assisted by state-of-the-art CAD software (Pro/E and ME 10) and the finest machinery available, such as Deckel, Jung, PeTeWe. We operate the latest AGIE Excellence wire and AGIE Innovation-series spark erosion machines and a Mikron HSM 700 3D High-Speed Milling machine. Around-the-clock air conditioning of our workshops and temperature-controlled grinding coolant guarantees to reach the "microns" as required on the drawings. Parts inspection is carried out on Zeiss, Werth measuring machines and other high-grade digital measuring equipment.
